Shillong, India

EDUCATION

North Eastern Hill University

Bachelor of Technology in Information Technology
• CGPA: **9.0/10.0** (through the **5th** semester)

Shillong, India
Aug 2023 – July 2027

PROJECTS

PromptVistaML — Prompt-Based ML Prediction

[\[Link \]](#)

Data Scientist , MLOps

- Built and deployed a **full-stack web application** that takes user prompts and triggers ML inference via an **API**.
- Successfully hosted **100 AI/ML models** and developed understanding of when, why, and how to use ML models.
- Developed an ML pipeline covering **data preprocessing → training → evaluation → deployment**.
- Implemented **input validation and fallback responses**, “Insufficient Data” when required fields were missing.
- Dockerized the complete system (**model inference**) for reproducible deployment and portability.
- Created **API documentation** for each ML model, including endpoints, request examples, rate limiting, deployment details, resources, Architecture Diagram, notebook previews, and example prompts.

DataScienceShow — Visualization & Analytics Dashboard

[\[Link \]](#)

Pandas, Matplotlib, Seaborn, Tabula

- Developed a **centralized Data Science suite** to showcase end-to-end workflows, including data visualization, dashboards, analytical reporting, and model/code assets.
- Built interactive **EDA and visualization modules** to highlight trends, distributions, correlations, and feature-level insights across multiple datasets.
- Designed dashboard views to present **KPIs, filters, and drill-down analytics** for business decision-making.
- Created structured **analytical reports** covering the problem statement, methodology, key findings, and actionable business recommendations.

Automated Data Pipeline — ML DataScarper

[\[Link \]](#)

Python, Pandas, MLflow, Docker, Airflow

- Built an **end-to-end automated data pipeline** to ingest, preprocess, and validate data from APIs/CSV sources.
- Implemented **scheduled workflows using Airflow/Cron** to trigger periodic data updates and model retraining.
- Designed a **model monitoring system** to detect performance degradation and automatically trigger retraining.
- Reduced manual data processing and training effort by **60–70%** through full workflow automation.

TECHNICAL SKILLS

Programming Languages: Python, C++, Dart

Machine Learning: Scikit-Learn, PyTorch, XGBoost, LightGBM, CatBoost

Data Science: Pandas, NumPy, Matplotlib, Seaborn, Tabula

MLOps: Docker, MLflow, Git, GitHub, Streamlit

AI/ML Tools: Gemini API, OpenAI API, LangChain

Databases: MySQL, PostgreSQL, Supabase

Backend: Flask, FastAPI

Cloud: Google Cloud Platform

ACHIEVEMENTS

- Solved **300+** [LeetCode](#) and [Codeforces](#) problems using Python and C++.
- **2nd Position** in Codemate 3.0 Coding Competition among **80+** participants ([Certificate](#)).
- **Google Cloud Platform Professional Engineer Certification** ([Certificate](#)).
- Achieved a model evaluation score of **8.8** in a Kaggle Machine Learning competition.
- Active member of the **Google Developer Group (GDG) NEHU** technical team, contributing to AI/ML workshops, technical sessions, and developing its website ([Link](#)).
- Documented and published **100 live AI/ML projects** with detailed explanations on [YouTube](#) and [Hugging Face](#)
